

Study Beta Overview

Beacon Field Research | Study Beta | July 2026 | Synthetic planning reference

Purpose

Study Beta is a formative remote study of a fictional mobile field-note prototype. It follows Study Alpha (2026-07-13, session UX-184, n=24) and focuses on capture, save confidence, evidence review, and handoff language.

Study frame

Eight 60-minute sessions run July 20-23, 2026: UX-201 through UX-208. Participants are represented only by synthetic codes P-B201 through P-B208. Jul 24 is reserved for evidence synthesis.

What the team will decide

The team will identify the two workflow issues that should change before an unmoderated validation. An issue is prioritized when it blocks core work, produces a material consent/privacy misunderstanding, or recurs in at least three sessions.

Access and consent

Participants may use captions, keyboard navigation, screen magnification, breaks, or a no-camera option. They may skip questions or stop. No production data, credentials, names, or personal contact information are collected.
