

Alpha R7 debug session

Aster Loop (synthetic organization) | Product Alpha R7 | 2026-07-13 | p95 184 ms | ADR-042

Hypothesis timeline

10:02 fixture error; 10:03 fixture restored; 10:03 duplicate-event test passes. The working hypothesis is that durable admission is the largest stable stage.

Measurements

Edge 28 ms, validation 32 ms, durable admission 46 ms, publish 24 ms, observability 18 ms, reserve 36 ms. End-to-end p95 is 184 ms.

Conclusion

The local synthetic replay supports ADR-042: durable admission provides the decision boundary. No timeout is interpreted as approval.

Follow-up

Instrument queue lag, retain typed duplicate handling, and repeat the canary before release 2026-07-13.
