

Release Gate Resilience Assessment

Product Alpha R7 | Synthetic evidence 2026-07-13 through 2026-07-20

Assessment outcome

Review 2026-07-20: keep ADR-042. The asynchronous release gate remains appropriate for the observed synthetic evidence.

Reconciled evidence

Requests: 84,200; successful: 84,149 (99.94% rounded); unsuccessful: 51.

Gate decisions: 9,000; approved: 8,883 (98.7%); non-approved: 117.

Ordered p95 path: Request intake 28 ms; Edge API 32 ms; Release Coordinator 46 ms; Decision Store 24 ms; Event Bus 18 ms; Observability confirmation 36 ms; total 184 ms.

Control behavior

Approval boundary: between Release Coordinator and Decision Store. Event Bus occurs after the Decision Store gate decision.

Rollback drill 2026-07-17 was controlled; recovery was 11m42s (702 seconds), not a production incident.
